

Cotton: World Markets and Trade

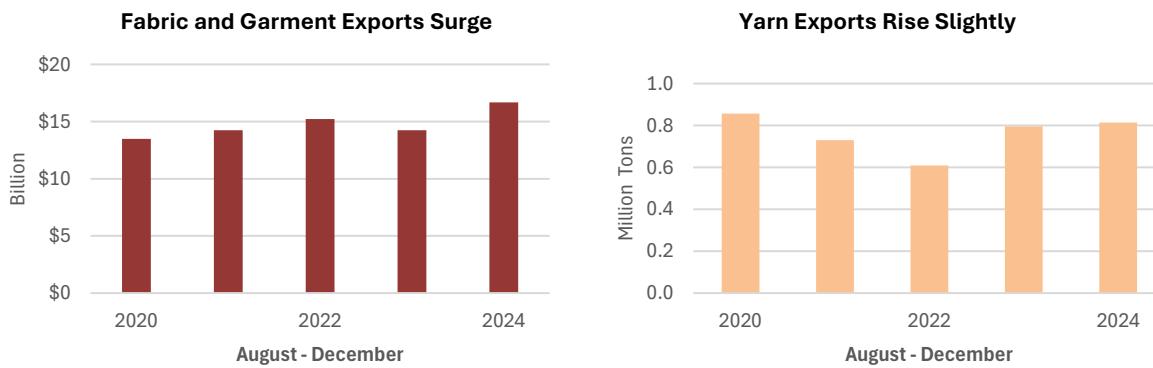

2024/25 Vietnam Cotton Imports Forecast at a Record

Vietnam's 2024/25 (Aug. – Jul.) cotton imports and [consumption](#) are projected at a record 7.4 million bales and expected to surpass the previous year by more than 10 percent. Imports account for practically all cotton consumed in the country. Several factors are expected to drive record demand, including a record pace of garment exports and an increasing pace of foreign-direct investment (FDI).

Vietnam's fabric and garment exports are a pivotal engine for economic growth and typically account for roughly 10 percent of annual export values. From August to December 2024, fabric and garment exports totaled a record \$16.7 billion, more than 17 percent above the previous year. Yarn exports (predominantly cotton fiber) were slightly above the previous year and are further supporting greater cotton demand. As mentioned in FAS Hanoi's most recent [Cotton and Products update](#), U.S. and EU retailers have increased apparel orders from Vietnam in place of the world's two largest suppliers, China and Bangladesh. The United States remained Vietnam's largest destination for fabric and garment exports in the last calendar year.

Vietnam [Textile](#) and Garment Exports (August – December)

Source: Vietnam Customs Statistics. Note: Data is for the 5-month period August – December, for example, 2024 represents exports from August 2024 – December 2024.

In the [2024 U.S. Fashion Industry Benchmarking Study](#), respondents (i.e., U.S. importers of apparel) were asked where their imports are sourced from and what percentage a particular country comprised of their imports. Vietnam was the second largest supplier behind China; however, China scored lowest on the ranking for “Geopolitical risk” and somewhat supports U.S. importers growing appetite to shift further away from China, traditionally the United States’ largest supplier of apparel.¹

Greater FDI is also spurring Vietnam’s cotton demand, with 2024 investments up more than 9 percent to over \$25.0 billion. These investments include new and future industrial parks for manufacturing textiles, with some parks housing multiple segments of the supply chain. Last year, Vietnam’s FDI-affiliated companies accounted for roughly 60 percent of the country’s fabric and garment exports and nearly 70 percent of yarn exports.

Vietnam sources current and future FDI in textiles from a vast array of countries including China, Singapore, Japan, South Korea, and Taiwan. Vietnam’s competitive advantages relative to competitors include: a skilled and low-cost labor force, proximity to China and global shipping routes, a relatively large volume of free trade agreements (FTAs), and an increasingly integrated textile supply chain.²

Chinese companies account for more than half of the FDI related to textiles in Vietnam and around one-third of the country’s spinning capacity. Chinese companies are shifting greater volumes of U.S. cotton to their Vietnamese mills while forward buying of U.S. cotton from mills located in China has stalled.³ In addition to these political uncertainties, Vietnam is a more favorable destination due to zero import duties and no tariff-rate quota (TRQ) on cotton lint.⁴

Lastly, the Uyghur Forced Labor Prevention Act (UFLPA) has incentivized Chinese firms to continue outsourcing additional textile production to Vietnam. Although Vietnamese apparel exports to the United States have been seized by U.S. Customs and Border Protection (CBP) in suspicion of violating the UFLPA, documentation showing cotton yarn was manufactured in Vietnam gives U.S. importers better assurance that CBP will release such seizures.⁵ Vietnam does not import cotton fiber from Xinjiang, hence, Vietnamese yarn (fiber being the feedstock) is not as susceptible to violating the law. In contrast, documentation showing yarn was produced in China may increase CBP scrutiny.⁶

¹ Vietnam ranked highest for U.S. companies sourcing 31-50 percent and 11-30 percent of their imports from one country.

² The article [here](#) outlines a recent \$590 million investment into Vietnam from a Singaporean textile company.

³ A similar phenomenon occurred during the first trade dispute between China and the United States. See the chart on the next page for 2018 and 2019 during the height of negotiations.

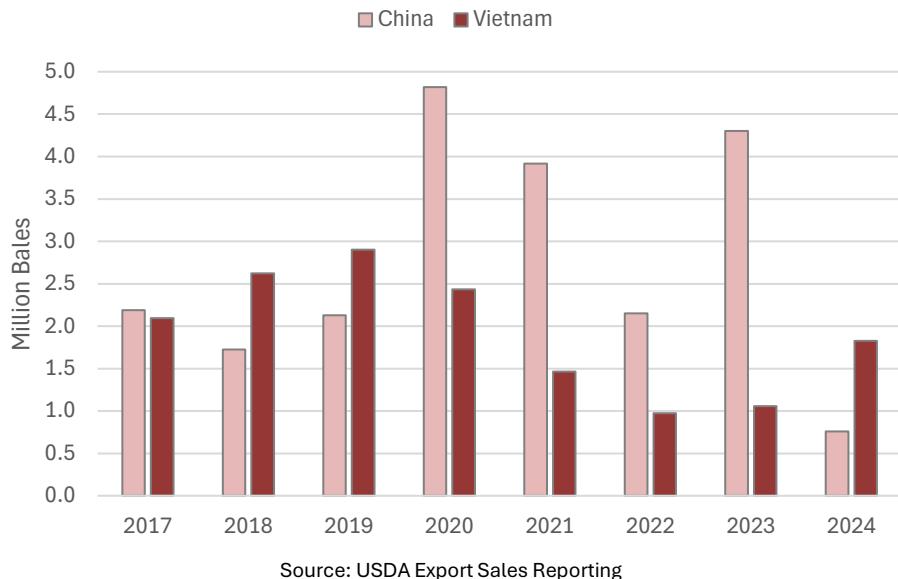

⁴ This is especially true for private companies that have operations in both countries.

⁵ Shipments from Vietnam have at times been detained due to the country being the largest importer of Chinese cotton fabric.

⁶ China is the largest cotton producer at 31.0 million bales and the Xiang autonomous region accounts for over 90 percent of the country’s production.

Vietnam's Demand for U.S. Cotton Rises While China's Purchases Fall

U.S. Sales and Shipments (Week 5 of the Calendar Year)

Source: USDA Export Sales Reporting

Increasing vertical integration in Vietnam's textile supply chain gives U.S. apparel importers better assurance in complying with the UFLPA due to less exposure to Xinjiang cotton fiber. These factors are not only shifting more U.S. cotton fiber to Vietnam but also improving demand for Vietnamese apparel. Prospects for future investments in fabric and garment facilities, both domestic companies and FDI, are expected to support record 2024/25 cotton consumption and beyond.

2024/25 Outlook

Production is forecast up more than 1.0 million bales to 120.4 million mainly on a 1.0 million-bale increase in China. China production is projected at 31.0 million bales, the largest crop since 2013/14. Global consumption is forecast up less than 100,000 bales to 115.9 million as higher use in Bangladesh, Pakistan, and Vietnam more than offsets a 500,000-bale reduction in India and a 100,000-bale reduction in the United States.

Global trade is roughly unchanged at 42.5 million bales. Higher import forecasts for Bangladesh, Pakistan, and Vietnam more than offset a 700,000-bale reduction in China imports. Global beginning stocks decreased more than 400,000 bales to 73.7 million on an upward revision to China consumption in 2023/24. Global ending stocks are projected up more than 500,000 bales to 78.4 million on lower India and U.S. consumption, a larger Brazil crop, and higher Pakistan imports.

The U.S. season-average farm price for 2024/25 is forecast down 1.5 cents to 63.5 cents per pound.

2024/25 Trade Outlook (1,000 480-lb Bales)

Major Importers:

	Previous	Current	Change	Reason
WORLD	42,451	42,471	20	
China	8,000	7,300	-700	Larger production
Vietnam	7,100	7,400	300	Record consumption
Bangladesh	7,800	8,000	200	Strong import data
Pakistan	4,800	5,000	200	Strong import data

Major Exporters:

	Previous	Current	Change	Reason
WORLD	42,481	42,506	25	

Futures and Spot Prices

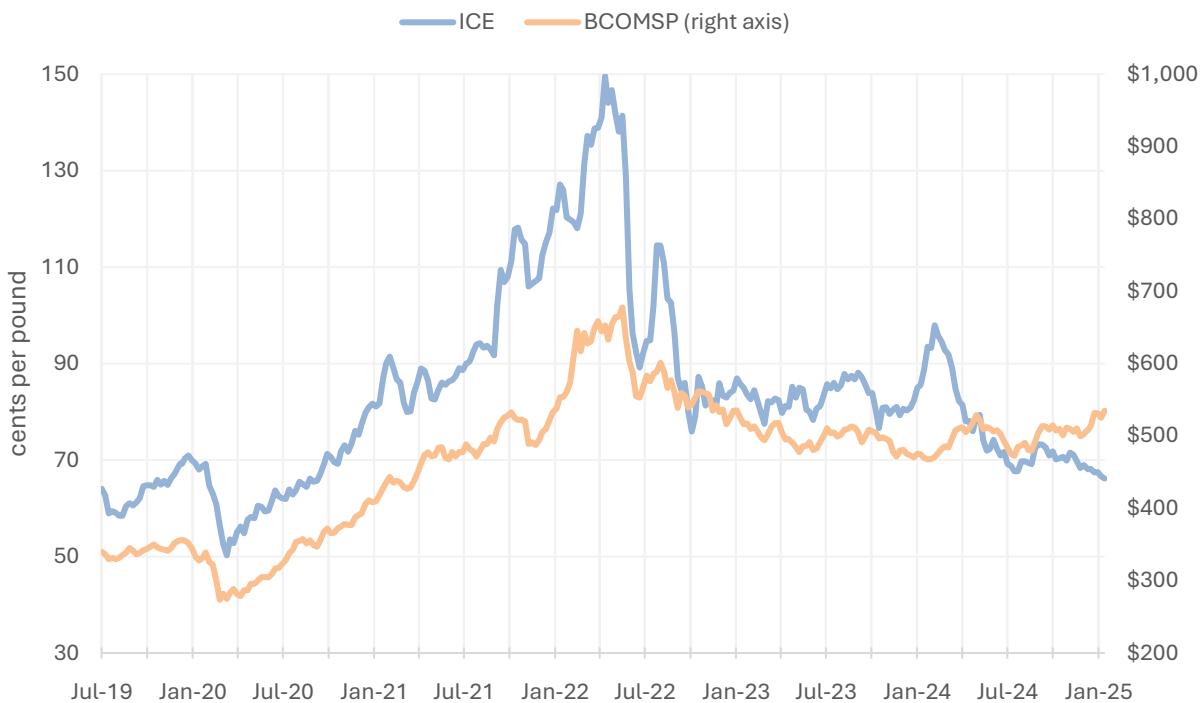

Since the last WASDE report, cotton futures on the Intercontinental Exchange (ICE) are down 2 cents to 66 cents per pound. Cotton futures reached their lowest level since September 2020 and are nearly 25 cents lower compared with last year. This is mostly owed to larger global production coupled with lower import demand.

The latest Commodity Futures Trading Commission *Commitment of Traders* supplemental [report](#) for futures and options showed the net long (buy) position (as February 4, 2025) for both Non-Commercial and Index participants falling to nearly -10,000 contracts compared with over 100,000 contracts last year.⁷ This dramatic reversal suggests speculators continue selling cotton futures contracts with the prediction that prices will fall further.

Commodity prices (represented by the Bloomberg Commodity Spot Index) climbed to their highest level in over 2 years amid higher gold futures. With gold and cotton prices exhibiting a low correlation, this partly explains cotton prices deviating from the index's rise.

⁷ A negative value of -10,000 means these participants own 10,000 more short (sell) position contracts compared with long (buy) positions.

Weekly ICE Cotton Futures and Bloomberg Commodity Spot Index

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

Changes Since January WASDE (cents per pound)

	A-Index	U.S.	China	India	Brazil	Pakistan
7-Jan	79.1	64.4	90.6	80.7	68.5	78.6
7-Feb	77.4	61.8	92.0	77.2	70.8	78.5
Change	-1.7	-2.6	1.4	-3.5	2.3	-0.1

U.S. spot prices are down roughly 2 cents to around 62 cents per pound. Southeast basis was unchanged at -125 basis points and North and South Delta was also unchanged at -250. West Texas-Kansas-Oklahoma increased slightly to -450, and average basis across the United States was mostly unchanged at around -400. Average U.S. basis is unchanged from the previous year.

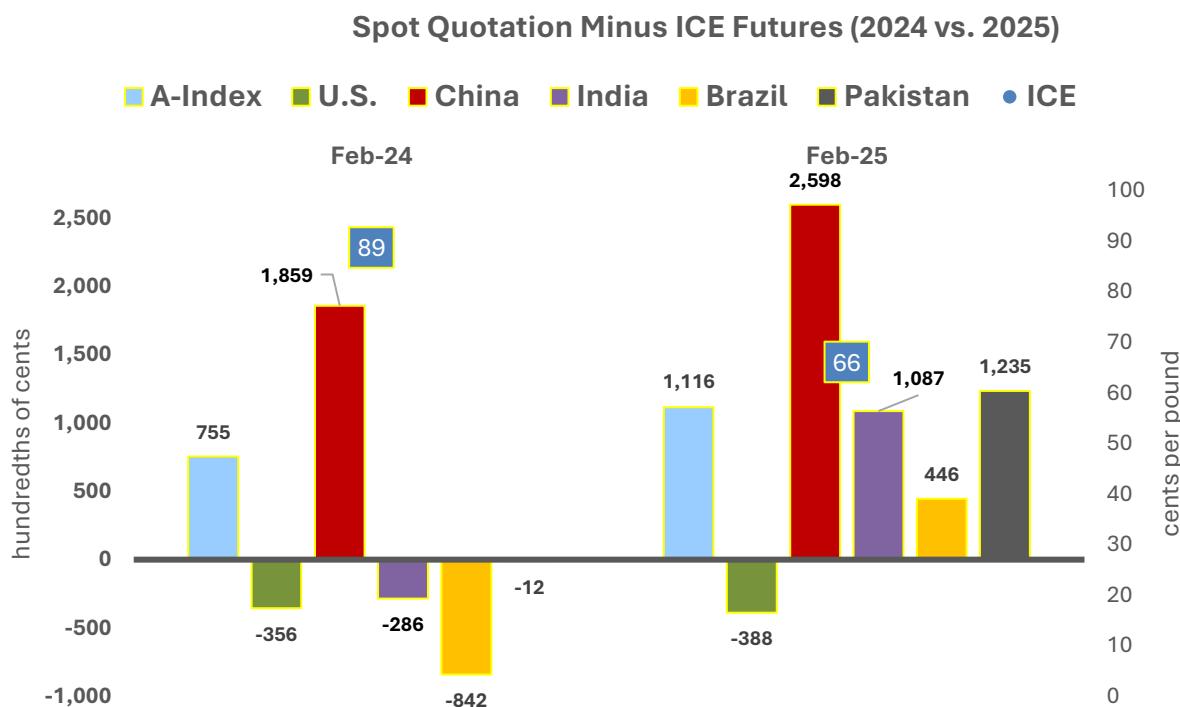

China prices are up 1 cent to 92 cents per pound as the nearby futures contract (May) on the Zhengzhou Commodity Exchange (ZCE) rose to around 13,600 per metric ton compared with 13,400 last month. Basis (relative to ICE) was up more than 300 points compared with last month to 2,600 points.

India prices are down 4 cents to 77 cents per pound. Basis is down roughly 100 points to 1,100 but remains significantly higher compared with last year's level of around -300 points.

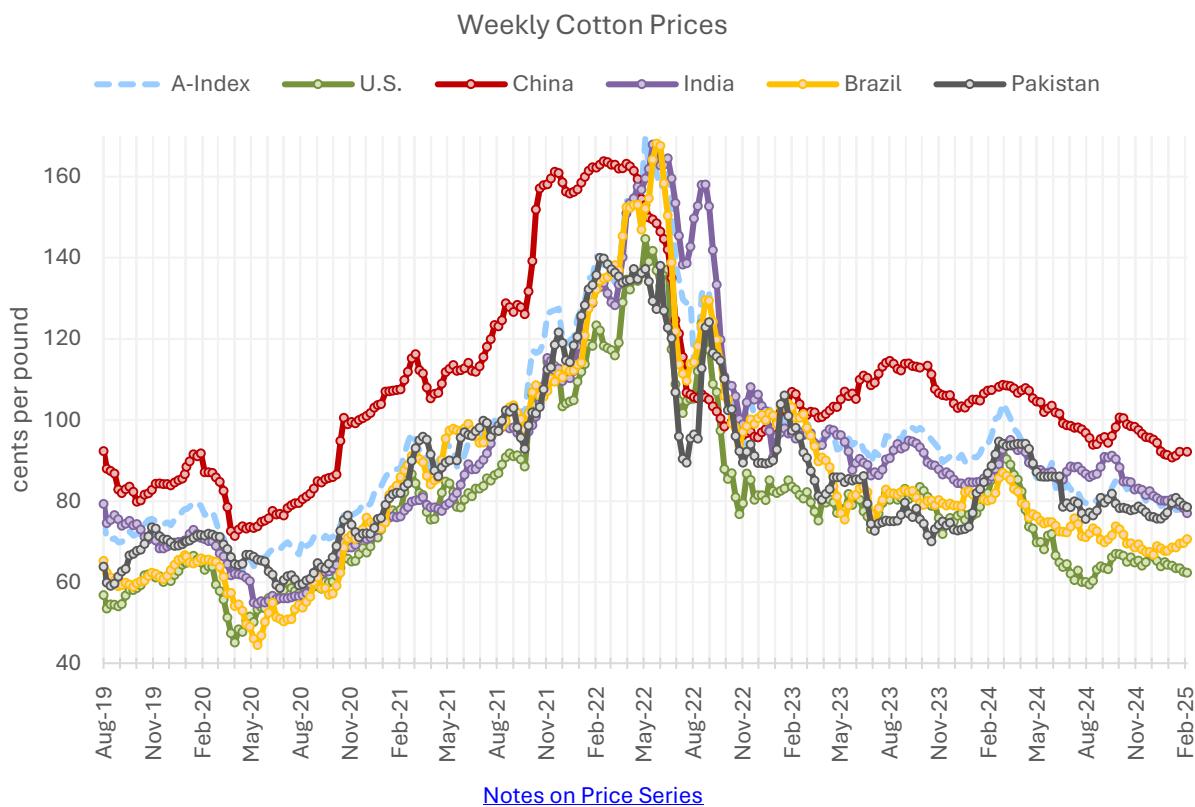

Brazil prices are up 2 cents to around 71 cents per pound, and basis is up more than 400 points for the second consecutive month to roughly 400 points, significantly higher compared with last year's level of -800.

Pakistan prices are unchanged at around 79 cents per pound. Basis increased 100 points this month to around 1,200 points.

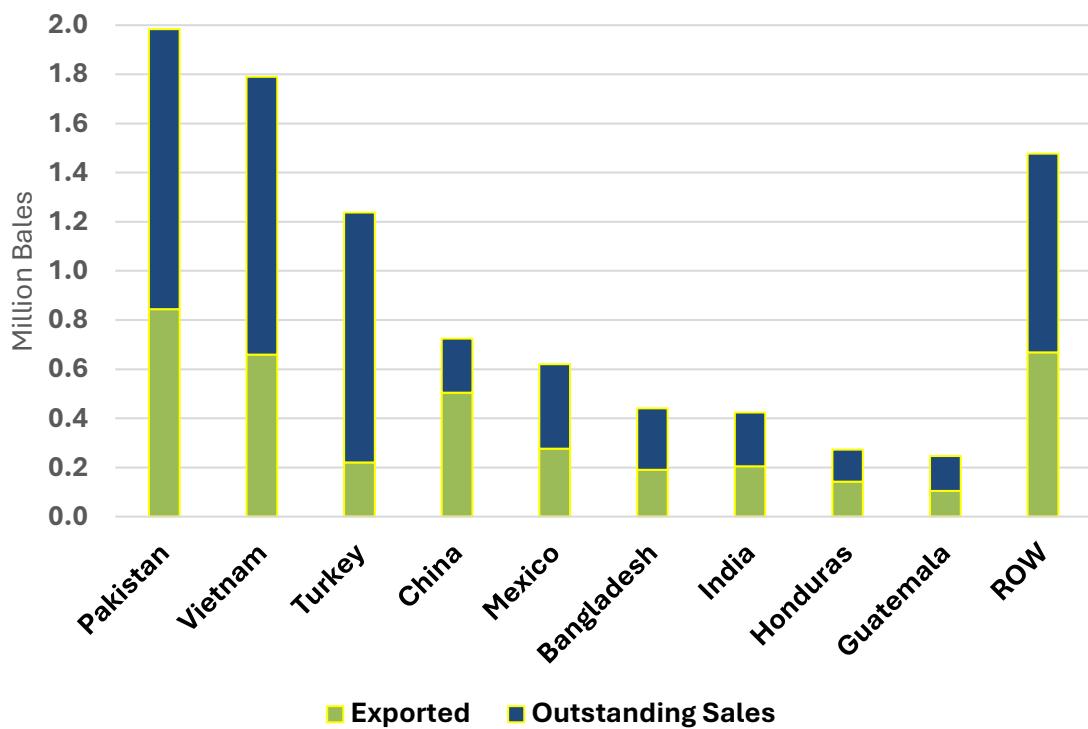

The observed **A-Index** this month includes the simple average of the following 5 quotes: Brazil, Memphis/Orleans/Texas, Memphis/Eastern, Ivory Coast, and Burkina Faso. Brazil is once again the lowest quoted origin at 75.50 cents per pound; Burkina Faso is the highest at 79.50 cents. The A-Index relative to ICE is roughly 11 cents higher and notably higher compared with the previous year. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

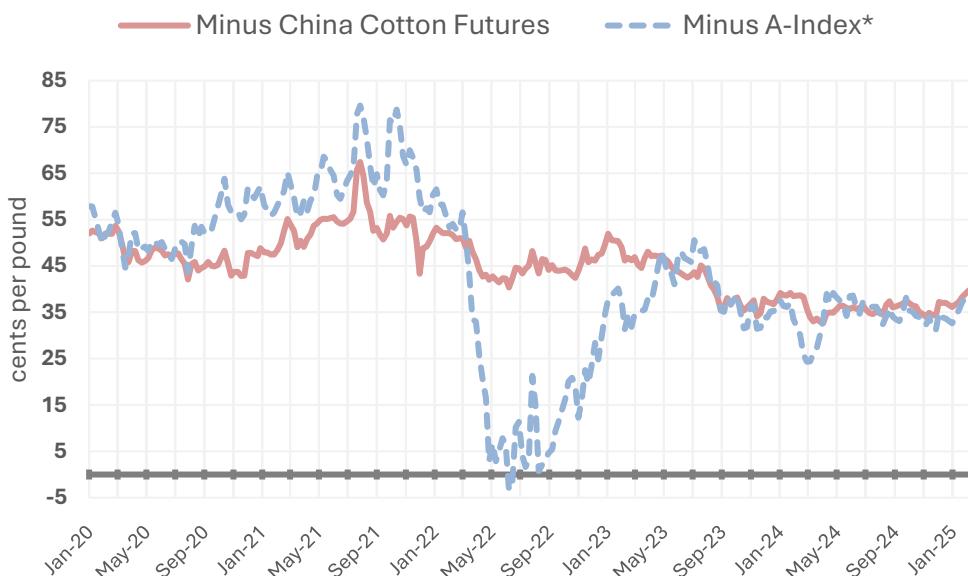

2024/25 U.S. Shipments & Outstanding Sales (Aug. 1, 2024 - January 30, 2025)

Source: USDA FAS Export Sales Reporting (ESR); Note: ROW (Rest of World)

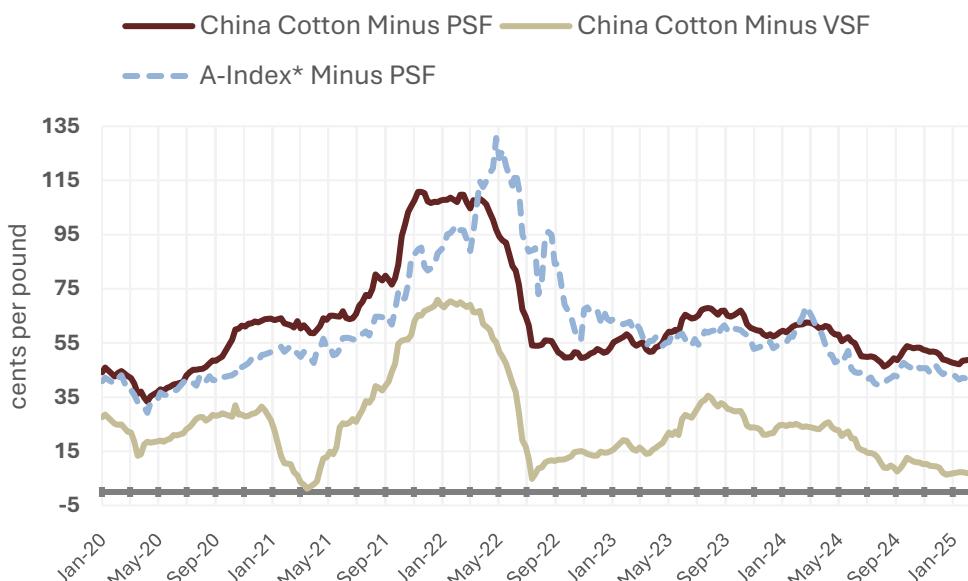

China Cotton Yarn Futures Relative to Cotton

Note: *A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

Cotton Fiber Relative to Competing Fibers

Note: *A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

Questions may be directed to:

Graham Soley – Foreign Agricultural Service 202-772-4235 (graham.soley@usda.gov)

Stephanie Galbraith – Foreign Agricultural Service 771-221-5954 (stephanie.galbraith@usda.gov)

Notes on Price Series

A-Index is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling $1\frac{1}{8}$ inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

U.S. is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

China is the reported China Cotton Price Index (i.e., CCIIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

India is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

Brazil is strict low middling and reflects the delivered price to a mill in São Paulo.

Pakistan is the ex-gin (at the gin yard) price in Karachi reflecting a $1\frac{1}{16}$ inch staple and grade 3.

Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

Marketing Year: August – July, for example, the 2024/25 marketing year is August 1, 2024 – July 31, 2025.

Area Harvested: The area of land planted to cotton from which seed cotton is harvested.

Beginning Stocks: The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1, 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

Production: The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

Imports/Exports: The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

Domestic Use: Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

Ending Stocks: The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024, of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year's beginning stocks.

Loss: Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

Other Terminology

Cotton Textiles: Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).⁸

Cotton Products: Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as [nonwoven products](#) (e.g., medical and hygiene products). When referencing “cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

Garment Manufacturers: Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

Example of a Cotton Supply Chain

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
