

Cotton: World Markets and Trade

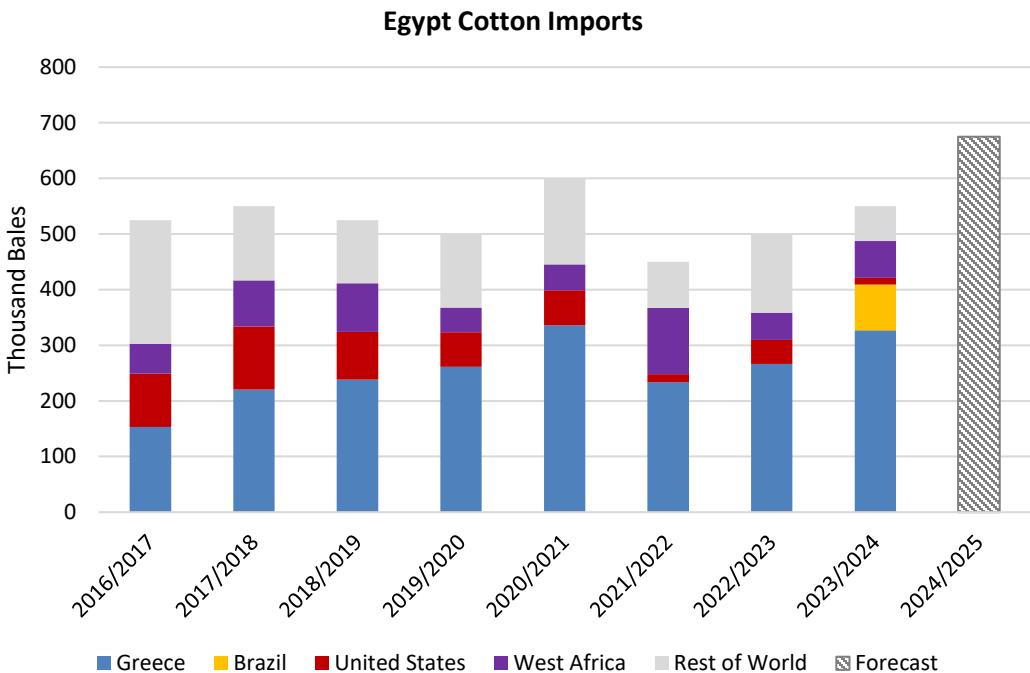

Egypt cotton consumption is projected at 750,000 bales in marketing year 2024/25 (August 2024 – July 2025), the highest level in 14 years, driven by a new wave of public and private investment. Imports are forecast at a record 675,000 bales to meet the demand of rising consumption since domestic production has stagnated over the past decade.

Egypt has historically been a prominent producer and consumer of cotton but now consumes less than half the peak volume reached in 1992/93. In recent years, the government has revitalized the industry by investing more than \$1.1 billion in the state-owned textile company as part of a plan to use more cotton domestically rather than export it.¹ The government also adopted policies to incentivize foreign investment such as establishing the Suez Canal Economic Zone with lower taxes and a pro-business environment.

Foreign companies are also drawn to Egypt by lower labor and energy costs and proximity to the EU market, the second largest importer of cotton products. In the past year, foreign investment from China totaled approximately \$1 billion covering all stages of textile production.² Multiple Turkish textile companies have also recently announced plans to build new spinning mills in Egypt. As additional spinning capacity from public and private investments materializes over the next few years, Egypt cotton consumption is projected to rise. Egypt has already jumped from the 16th largest cotton consumer last year to tie for 13th in 2024/25, if current forecasts are realized.

² Egypt's State Information Service announced [a \\$500 million investment by China's Jiangsu Lianfa Textile Co.](#) and [a \\$385 million investment by China's Lutai Group](#) in addition to multiple smaller investments.

Source: USDA/FAS computation using data from Trade Data Monitor, LLC.

Egypt has relied on imports to support increasing consumption as domestic production stagnated in recent years and the government more than doubled the guaranteed farm price in 2024/25 despite falling global prices.³ According to Egypt's Cotton Arbitration & Testing General Organization (CATGO), just 50,000 bales of domestic cotton have been distributed to local mills so far this marketing year, roughly equal to recent years, despite higher consumption. This contradicts the government's intention to redirect domestically produced cotton from exports to local mills.

Greece is the principal source for Egypt cotton imports, accounting for more than half of market share during the past decade. The United States has historically been a top supplier with Pima cotton serving as a substitute for Egyptian extra-long staple (ELS) varieties while West African and Sudanese supplies have met the demand for more affordable upland cotton.

In 2023/24, Brazil became the second largest supplier after gaining market access in 2022/23. In the first 7 months of 2024/25, Brazil export volume tripled compared to the same period last year as it continues to offer a lower price compared with competitors. Brazil remains the second largest supplier this year behind Greece which has seen less dramatic but still notable growth of 60 percent year over year. As a result of this growth from top suppliers, Egypt cotton imports are forecast at a record 675,000 bales in 2024/25. In contrast, U.S. cotton has lost market share to more affordable suppliers. FAS Export Sales Reporting shows sales of less than 1,000 bales of upland cotton for 2024/25, compared to the 10-year average of nearly 50,000 bales. This reflects Egypt's expansion from a niche supplier of specialty cotton products to a more significant textile producer that competes on price with other textile producing countries.

³ For information on Egypt cotton production and exports, see the [Cotton and Products Annual 2025](#) from FAS Post in Cairo, Egypt.

2024/25 Outlook

Production is mostly unchanged at 120.9 million as a 250,000-bale increase in China is offset by marginal reductions elsewhere. China production is forecast at 32.0 million bales, the highest level in more than a decade and roughly 25 percent of the global 2024/25 crop.

Global consumption is forecast down more than 500,000 bales to 116.0 million on lower use in China. As the United States is China's largest export market for cotton products, significantly higher U.S. import tariffs are expected to lower cotton demand.

Global trade is forecast down nearly 400,000 bales to around 42.3 million. Lower import forecasts for China and Indonesia more than offset higher Turkey imports. Lower exports from the United States, Brazil, Australia, and various West African countries more than offset higher shipments from Turkey.

Global ending stocks are expected to rise more than 500,000 bales to 78.9 million with larger carryover in China. For the United States, ending stocks are raised 100,000 bales to 5.0 million on lower exports; outside of the onset of COVID-19 (2019/20), this would be the highest level in more than 15 years. The U.S. season-average farm price for 2024/25 is unchanged at 63 cents per pound.

2024/25 Trade Outlook (1,000 480-lb Bales)

Major Importers:

| | Previous | Current | Change | Reason |
|------------------|----------|---------------|--------|---|
| WORLD | 42,686 | 42,361 | -325 | |
| China | 6,800 | 6,500 | -300 | Larger production and lower consumption |
| Indonesia | 2,000 | 1,900 | -100 | Lower consumption |
| Turkey | 4,200 | 4,300 | 100 | Higher consumption |

Major Exporters:

| | Previous | Current | Change | Reason |
|----------------------|----------|---------------|--------|---------------------------|
| WORLD | 42,706 | 42,331 | -375 | |
| Turkey | 1,000 | 1,200 | 200 | Recently strong shipments |
| Australia | 5,400 | 5,300 | -100 | Weaker global demand |
| Brazil | 13,000 | 12,900 | -100 | Weaker global demand |
| United States | 11,000 | 10,900 | -100 | Weaker global demand |

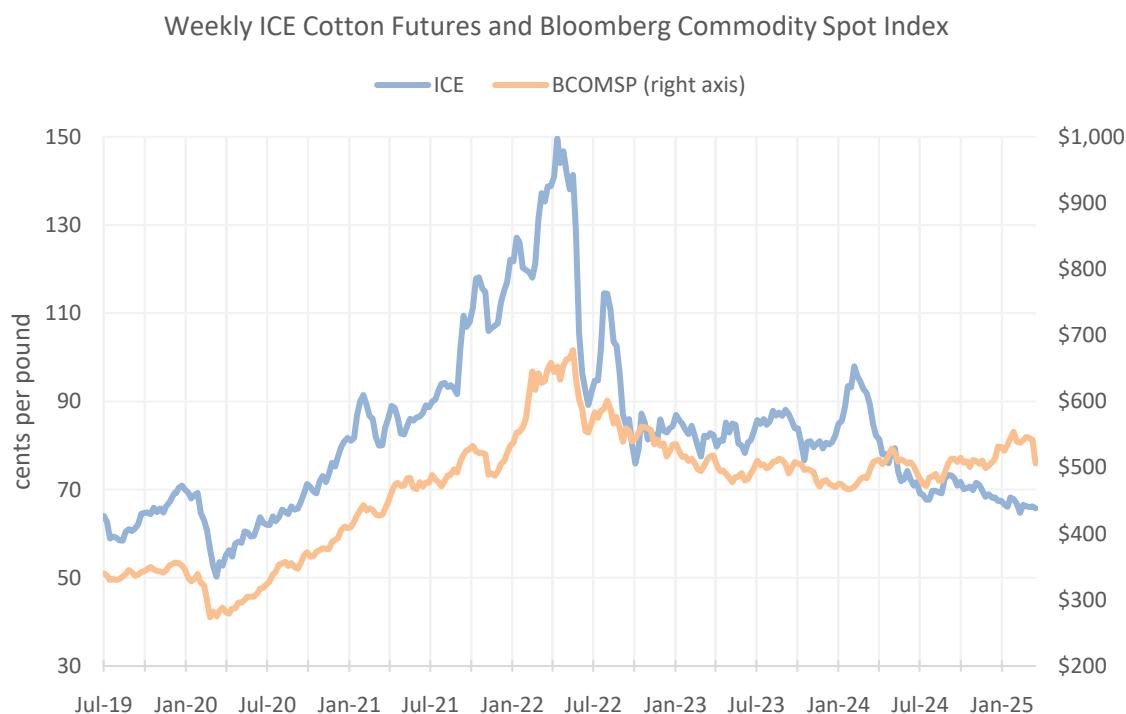

Futures and Spot Prices

Since the last WASDE report, cotton futures on the Intercontinental Exchange (ICE) are mostly unchanged at around 66 cents per pound despite heightened volatility. Like last month, additional Chinese tariffs on U.S. cotton pressured cotton futures to 63 cents per pound before rising 3 cents. The *Prospective Plantings* report published on March 31 estimates roughly 9.9 million acres for all U.S.

cotton planted area, roughly meeting industry expectations. Please see page 33 of the [report](#) to learn more about the statistical methodology for acreage estimates.

The latest Commodity Futures Trading Commission *Commitment of Traders* supplemental [report](#) for futures and options showed the net long (buy) position (as April 1, 2025) for both Non-Commercial and Index participants rising to around -10,000 contracts compared with -25,000 contracts last month.⁴ Cotton futures are more than 20 cents lower compared with last year, yet speculators remain net short and predict prices will fall even further.

Commodity prices (represented by the Bloomberg Commodity Spot Index) fell significantly compared with last month amid escalating trade tensions.

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

| | Changes Since March WASDE (cents per pound) | | | | | |
|--------|---|-------------|-------------|------------|-------------|-------------|
| | A-Index | U.S. | China | India | Brazil | Pakistan |
| 7-Mar | 77.0 | 62.6 | 93.0 | 77.6 | 72.8 | 75.1 |
| 8-Apr | 78.0 | 62.0 | 90.2 | 79.4 | 70.1 | 72.8 |
| Change | 1.0 | -0.6 | -2.8 | 1.8 | -2.7 | -2.3 |

⁴ A negative value of -10,000 means these participants own 10,000 more short (sell) position contracts compared with long (buy) positions.

U.S. spot prices are once again unchanged at around 62 cents per pound. Southeast basis was slightly lower at -125 basis points and North and South Delta were also lower at -225. West Texas-Kansas-Oklahoma was unchanged at -425, and average basis across the United States was also unchanged at around -350. Average U.S. basis is more than 300 points higher compared with the previous year and likely owed to significantly lower futures.

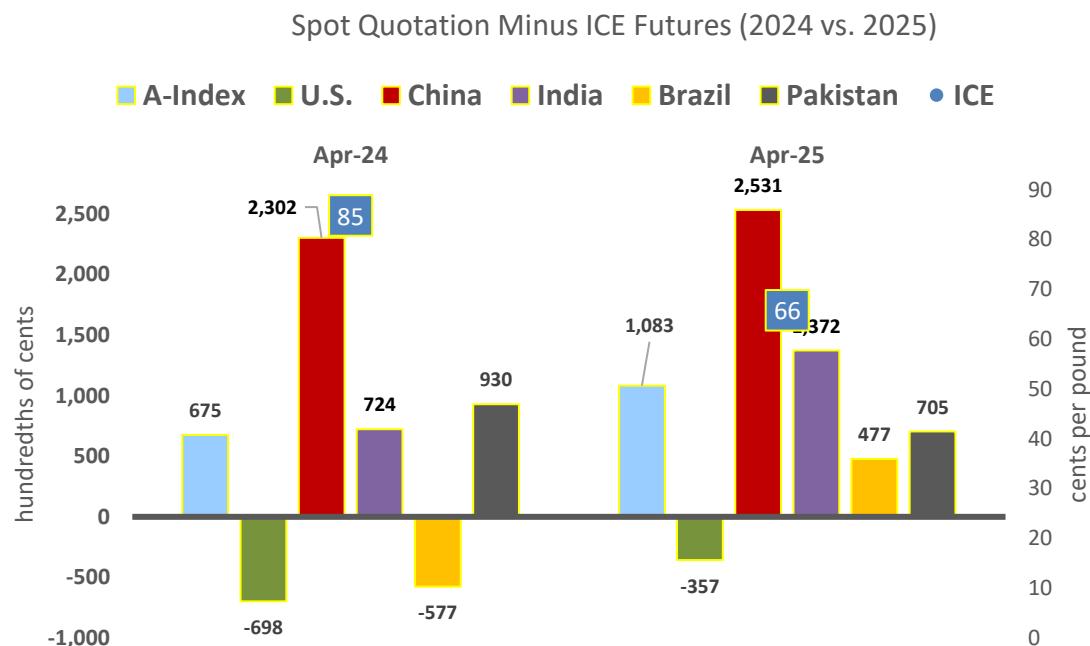

China prices are down 3 cents to 90 cents per pound on a lower yuan and falling prices for the nearby futures contract (May) on the Zhengzhou Commodity Exchange (ZCE). Basis (relative to ICE) is down 300 points compared with last month to around 2,500 points.

India prices are up slightly to around 79 cents per pound. Basis is up 100 points to nearly 1,400 and higher compared with last year's level of around 700 points.

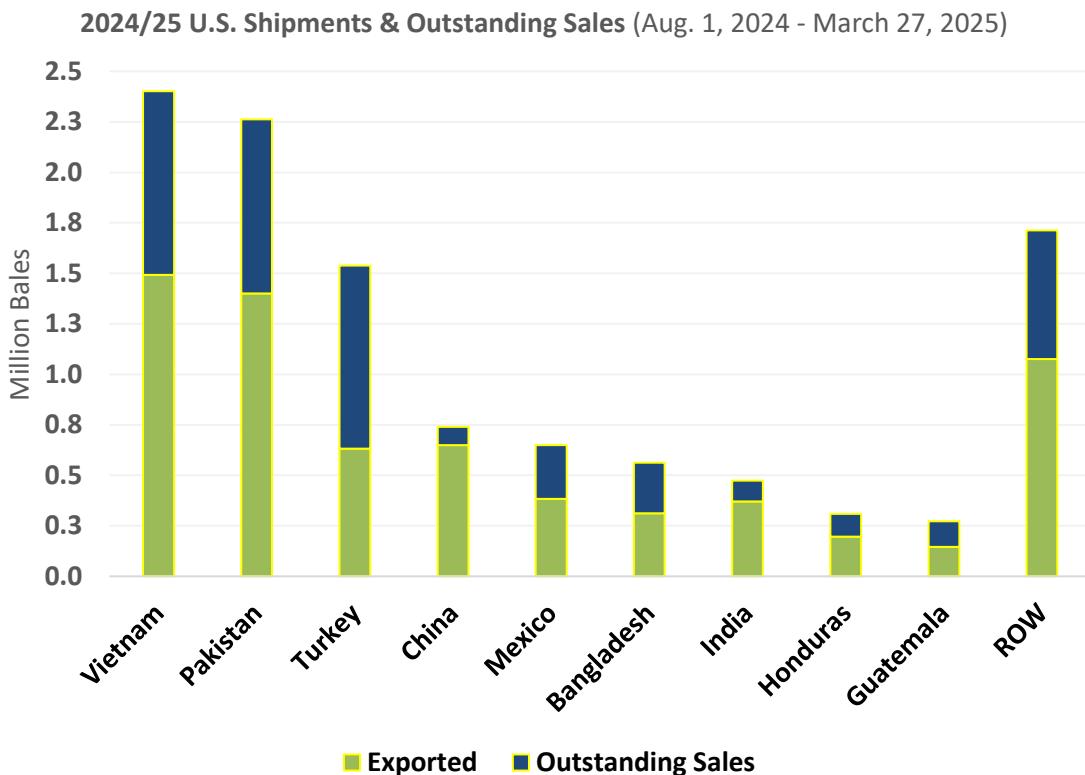

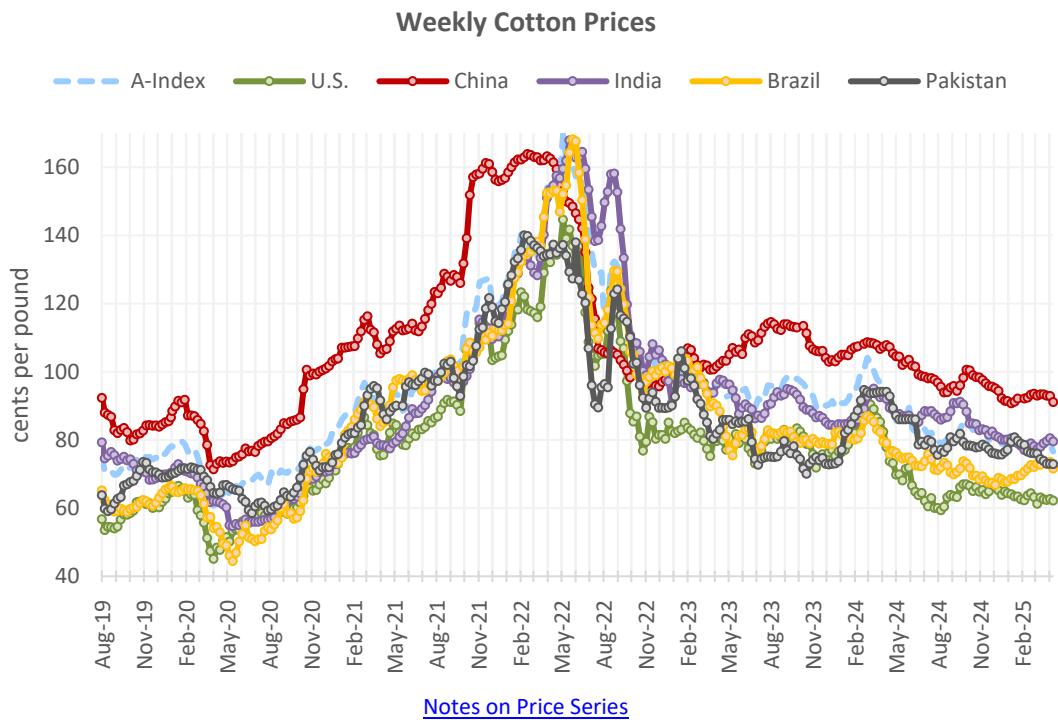

Brazil prices are down 3 cents to around 70 cents per pound, and basis is down nearly 400 points to roughly 500 points, but significantly higher compared with last year's level of -600.

Pakistan prices are down 2 cents to around 73 cents per pound. Basis declined more than 400 points this month to around 700 points.

The observed **A-Index** this month includes the simple average of the following 5 quotes: Brazil, Memphis/Orleans/Texas, Memphis/Eastern, Ivory Coast, and Burkina Faso. Brazil is once again the lowest quoted origin at 76.00 cents per pound; Burkina Faso is the highest at 80.25 cents. The A-Index relative to ICE is roughly 11 cents higher and notably higher compared with the previous year. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

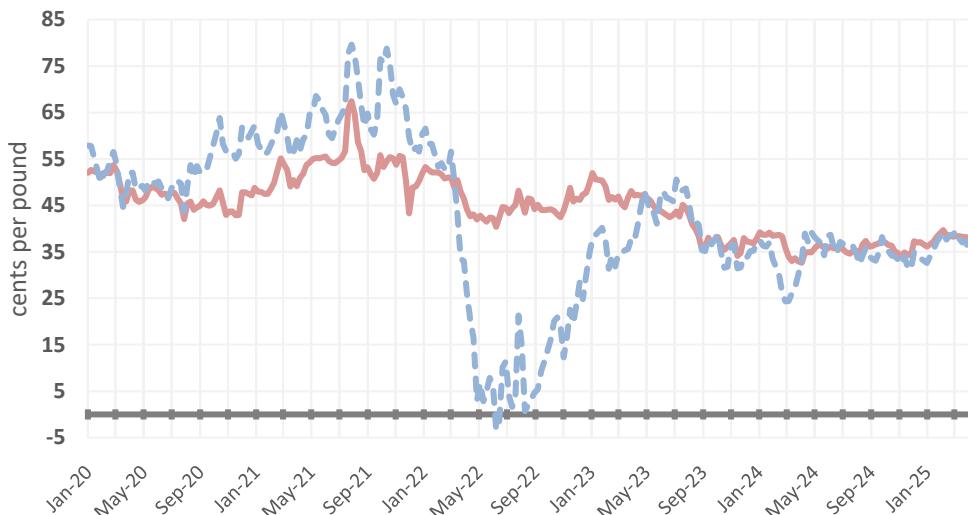

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

China Cotton Yarn Futures Relative to Cotton

— Minus China Cotton Futures - - - Minus A-Index*

Note: *A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

Cotton Fiber Relative to Competing Fibers

— China Cotton Minus PSF — China Cotton Minus VSF

- - - A-Index* Minus PSF

Note: *A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

Graham Soley – Foreign Agricultural Service graham.soley@usda.gov

Stephanie Galbraith – Foreign Agricultural Service stephanie.galbraith@usda.gov

Notes on Price Series

A-Index is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1^{1/8} inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

U.S. is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

China is the reported China Cotton Price Index (i.e., CCIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

India is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

Brazil is strict low middling and reflects the delivered price to a mill in São Paulo.

Pakistan is the ex-gin (at the gin yard) price in Karachi reflecting a 1^{1/16} inch staple and grade 3.

Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

Marketing Year: August – July, for example, the 2024/25 marketing year is August 1, 2024 – July 31, 2025.

Area Harvested: The area of land planted to cotton from which seed cotton is harvested.

Beginning Stocks: The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1, 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

Production: The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

Imports/Exports: The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

Domestic Use: Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

Ending Stocks: The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024, of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year’s beginning stocks.

Loss: Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

Other Terminology

Cotton Textiles: Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).⁵

Cotton Products: Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as nonwoven products (e.g., medical and hygiene products). When referencing “cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

Garment Manufacturers: Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

Example of a Cotton Supply Chain

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
